# Project Objective

---

Our main objective is to help students from disadvantaged backgrounds to have a chance at education.

How we will achieve this is by creating a website that will allow them to have this chance to an education.

Where our government, bursaries, education loans, funding schemes have not been able to assist, we hope to bridge that gap with this platform.

# Problem Statement

---

- No sufficient fund for Education.
- The pandemic has made Government to squeeze budgets.
- Disadvantage populations all over the country are left behind.

# Proposed solution

---

A Peer-to-peer web application, which directly connect disadvantage students to potential funders.

# Technologies used

---

## Client side technologies(Front-end):

- HTML
- CSS
- JAVASCRIPT

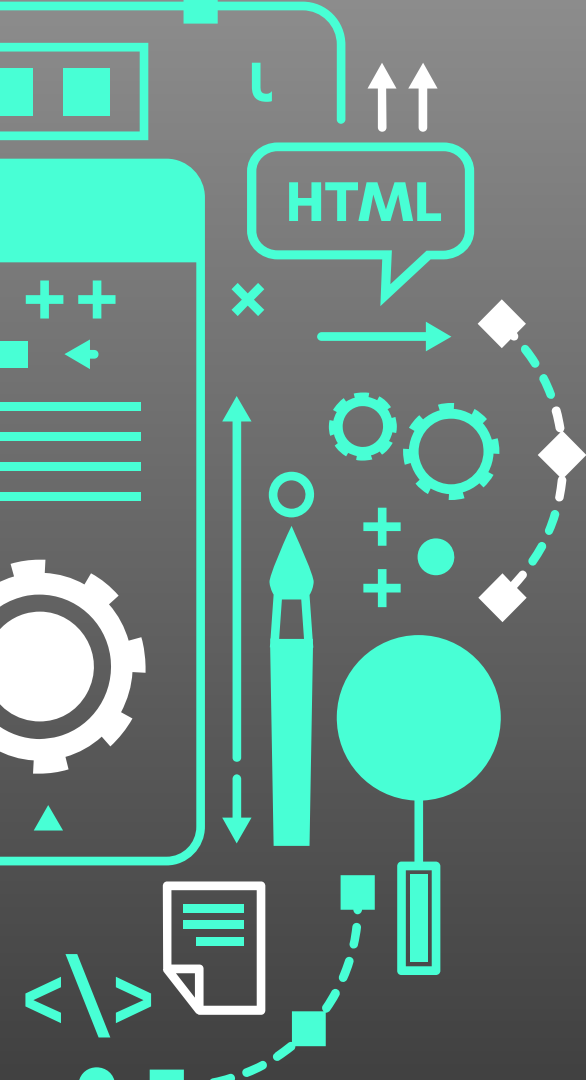

CSS

## Server side technologies(Back-end):

- PHP
- MYSQL
- APACHE2

# THANKS!
